Product Description

SeaGuard contains 80% Pure Unrefined Sea Salt and 20% Organic Icelandic Kelp – the highest percentage of all natural Kelp on the market.

The minerals in Kelp are present in a naturally chelated form, which makes them more readily available for digestion and assimilation. Chelated minerals maintain the required mineral balance during stress, heavy activity and prevent unnecessary deficiencies.

Kelp has the greatest vitamin and mineral concentration of any food. All known varieties of Kelp are found off the northern coast of Brittany where they are renowned as the finest in the world, and are highly prized for their quality.

Sea vegetables are rich in vitamins, contain all fifty-six minerals and trace elements identified as requirements, plus they have other nutrients, many of which are known to offer protection against radiation or chemical pollutants.

SeaGuard contains 80% Pure Unrefined Sea Salt and 20% Organic Icelandic Kelp from crystal clear waters. The seaweed plumps up when it encounters water. It will add complexity to your horses feed. It’s also a fantastic source of calcium, magnesium and iron. Kelp helps to reduce stress, improve the general health, digestion, condition of skin, pigmentation, hooves and gives your horse a beautiful, shiny coat.

You will see your horse’s coat bloom and an improvement in hooves. This product has a high potency, and contains a full spectrum of minerals. Can be used as a natural mineral lick. Highly complementary to all other supplements. Recommended for all horses in training.

The chief source of nutrients in SeaGuard is the Organic Kelp itself (Ascophyllum nodosum). High quality Kelp is one of nature’s richest sources of vitamins, minerals and amino acids. SeaGuard contains over 12 vitamins, 60 major and trace minerals, and 20 key amino acids. These nutrients are all naturally balanced giving your horse what it needs most: reliable fortification.
Many of the trace minerals contained in sea salt and Kelp act as building blocks of a wide range of enzymes, which maintain the proper functioning of all the body’s vital systems. This enzymatic action of Kelp helps to extract the maximum nourishment from the feed and to digest it completely. Horses that are fed Kelp tend to eat less grain and roughage because they need less when their feed is fully utilized through the digestive action of the Kelp. This saves you money on your feed bill.

The best genuine sea salt is hand gathered, never blended with inferior salts, nor touched by machinery.

Contains only 95% sodium chloride vs. 99.9% in ordinary table salt while the other 5% is a beneficial blend of trace elements.

Dosage
Introduce SeaGuard gradually into your horse's diet. For a 1,000 pond horse, use 1 teaspoon a day the 1st week, 2 teaspoons a day the 2nd week. Never exceed one ounce a day in feed. Mix SeaGuard evenly into feed. If using all-dry feed, then you should mix SeaGuard with liquid so it will adhere to the feed. Alternatively, feed free choice - that way the horses can easily obtain what they need. Colts and ponies: Mix ½ teaspoon a day in daily feed ration. Follow direction above for use.
